

## Install VPN on Non-SSW Computer

1. Open a web browser, i.e. Google Chrome, Firefox, or Microsoft Edge
2. Navigate to <http://vpn.umaryland.edu>

*UMB SSL VPN*

Note: At this step, make sure you have your mobile phone out

3. Select "SSW" from the dropdown menu labeled "Group"

Please enter your username and password.

GROUP:

USERNAME:

PASSWORD:

2nd Password

4. Enter your username, which is before the @ in your email. For example, "sthornton" for [sthornton@ssw.umaryland.edu](mailto:sthornton@ssw.umaryland.edu)
5. Enter your UMID password (password you login to your computer with) into the "Password" area
6. Enter the word "push" or "phone" (without the quotation marks) depending on how your DUO (multi-factor authentication) is setup. Choosing "push" sends a text message to your phone and using "phone" would be to have DUO call your phone

Please enter your username and password.

GROUP:

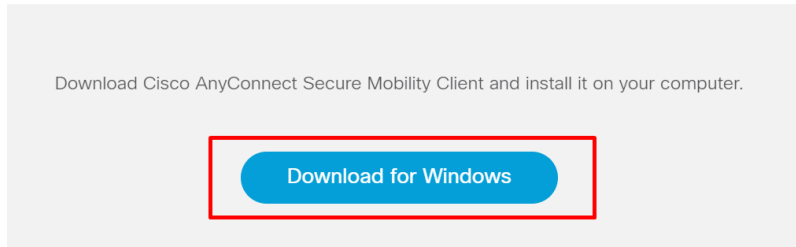

USERNAME:

PASSWORD:

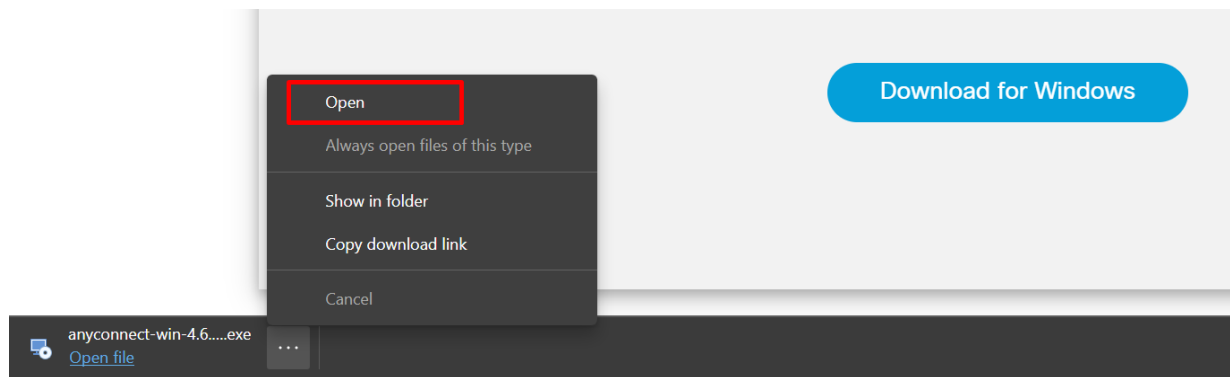

2nd Password

7. **Quickly** accept the DUO push or call to your mobile phone, as this can timeout
8. Back at your computer, click the blue button in your Internet browser labeled “Download for Windows” or “Download for Mac”

## Download & Install

9. The Cisco AnyConnect software will now download
10. When download is complete, select “open”. Depending on your computer’s and browser’s download preferences, you may need to open a “Downloads” folder to find this file. Or, like in the below screenshot, the file may appear at the bottom of your Internet browser window.

11. Follow the prompts to install the software
